

Tracheseal

This unique post-decannulation tracheostomy wound dressing accelerates the healing process and offers greater patient comfort following the removal of a tracheostomy tube.

- Three customised shape designs to adapt to different patient requirements
- Centre button plate enables accurate and consistent location of the tracheostomy wound
- Gentle pressing of the button plate prevents unwanted passage of air through the wound during actions such as talking, coughing or sneezing
- Vapour permeable waterproof adhesive film provides optimal moisture wound management, pain-free removal and reduces trauma during removal

Intended use:

The device is used on patients immediately following the removal of a tracheostomy tube until the healing process is complete.

Materials:

Silicone wound contact layer (0.2mm thick), polyurethane foam pad, water-proof pu film backing

Packaging:

Individually packed sterile, 10 units per carton

Regulatory compliance:

Meets the essential requirements of directive 93/42/EEC as amended 2007/47/EC for Class IIb medical devices

Manufacturing Environment:

Manufactured in a cleanroom constructed to comply with ISO 14644 Class 8 @ 0.5µ manned

Sterilisation:

Sterilised by Ethylene Oxide

Shelf Life:

3 Years

Code	Description	Dressing thickness	Absorption capacity	Dimensions
TS0003	Tracheostomy dressing (Oval)	3 mm	≥0.25 g/cm ²	75 x 65mm
TS0004	Tracheostomy dressing (Round)	3 mm	≥0.25 g/cm ²	75 x 75mm
